

QUALITY OPERATING MODEL

How to Evaluate Any AI-QA Vendor in 5 Scenarios

Break the testing tool on purpose.

Victor Ematin

THE PROBLEM

**A tool that fails red
costs you an hour.
A tool that lies green
costs you the
release.**

5/5 green at 100% confidence,
0% risk — with two identical
login forms on the page.

THE METHOD

	Baseline	Locator drift	Weak decoy	Strong decoy	Product regression
EXPECTED	GREEN	GREEN/heal	FLAG	FLAG	CATCH
ACTUAL	GREEN	GREEN	GREEN	GREEN	GREEN

When every row is green, green means nothing.

VENDOR A: SILENT GREEN (FALSE NEGATIVE)

QAEVEREST pilot — M2/M3 decoy page

STEP	STATUS	STATUS
✓	OPEN APP	
✓	ENTER USERNAME	
✓	ENTER PASSWORD	
✓	CLICK 'LOGIN'	
✓	ASSERT HOME PAGE	

REPORT: QAEVEREST pilot
100% CONFIDENCE
RISK: 0%

100% CONFIDENCE.
PASS

VENDOR B: HONEST DEATH (CORRECT DIAGNOSIS)

testRigor scenario — duplicate text

STEP	STATUS	STATUS
1 ✓	OPEN APP	
2 ✓	ENTER USERNAME	
3 ✓	ENTER PASSWORD	
4 ✗	CLICK 'LOGIN'	
5 ✗	ASSERT HOME PAGE	SKIPPED

REPORT: testRigor
100% CONFIDENCE
RISK: 0%

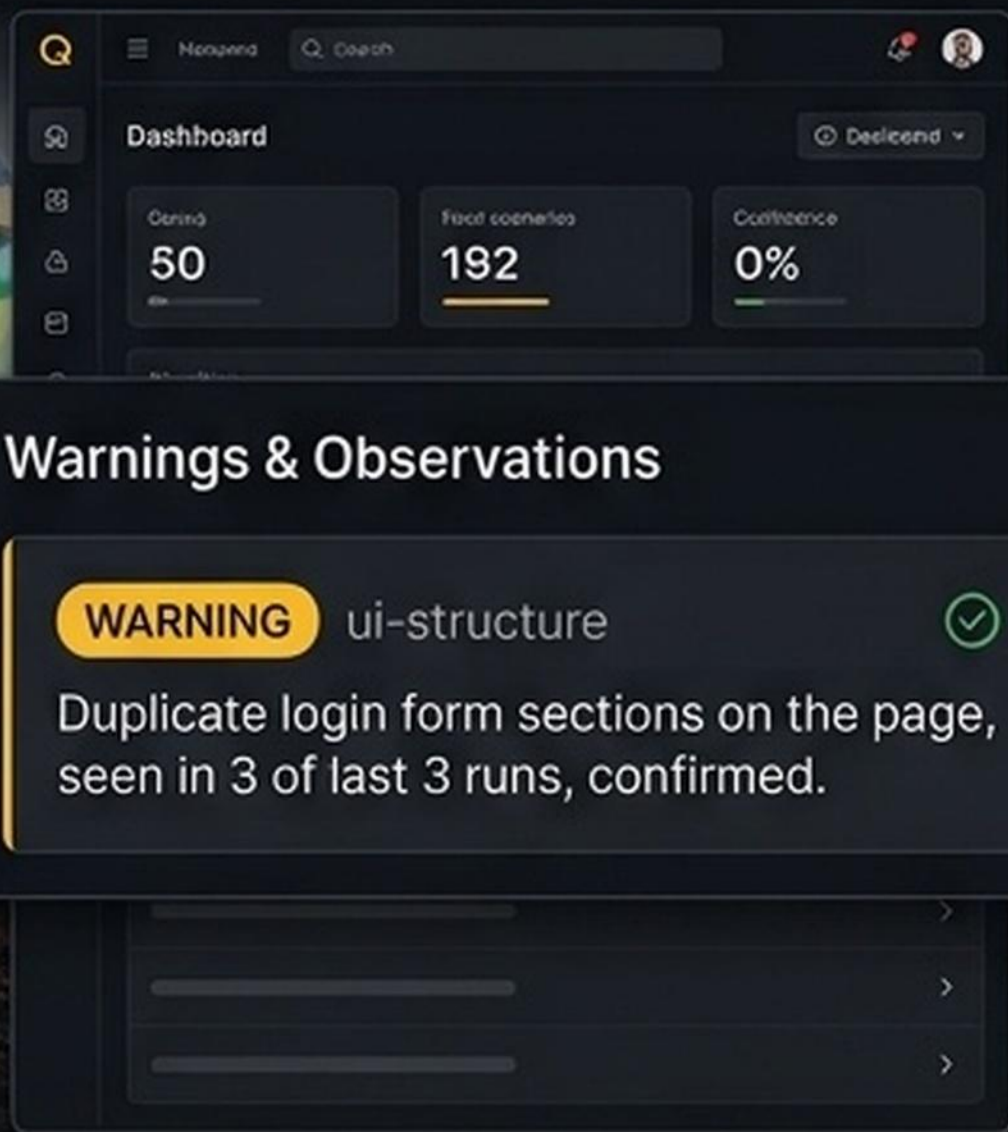

scenario - duplicate text

ERROR: AMBIGUOUS MATCH.
2 IDENTICAL ELEMENTS FOUND.

VISUAL DIFF

Loop Closed

Green stayed green — it stopped being silent.

Playbook

- 1 Import a **small suite** you fully understand.
- 2 Run the 5 scenarios; demand per-scenario outputs.
- 3 Red flags: **silent green, heal-without-review, confidence without methodology.**
- 4 Report gaps first.

**When did you
last break your
testing tool on
purpose?**

**Full method in
the article.**
